AUTOMOBILE SHOWROOM MANAGEMENT SYSTEM

DEPARTMENT OF COMPUTER ENGINEERING

Problem Statement:

- Customers face delays in car purchase and service scheduling.
- Manual record keeping causes errors and inefficiency.
- No centralized system for inventory, sales, and customer tracking.

System Architecture

Customer Side (App)

Modules:

- Browse Cars
- Bosk Test Drive
- Purchase Car
- Track Orders

Platform:
Android Client (Flutter)

Process:
Student order (Car Selection) → Online Payment.

Integrations

Payment Gateway (Optional)

Admin Side

Modules:

- Admin Dashboard
- Manage Inventory
- Manage Orders

Platform:
Admin Panel (Flutter)

Process:
Admin views dashboard → Updates order record → Status is updated.

[Google Firebase Backend]

Authentication

Stares Identifier, Providers, and User UID

Firestore [Database]

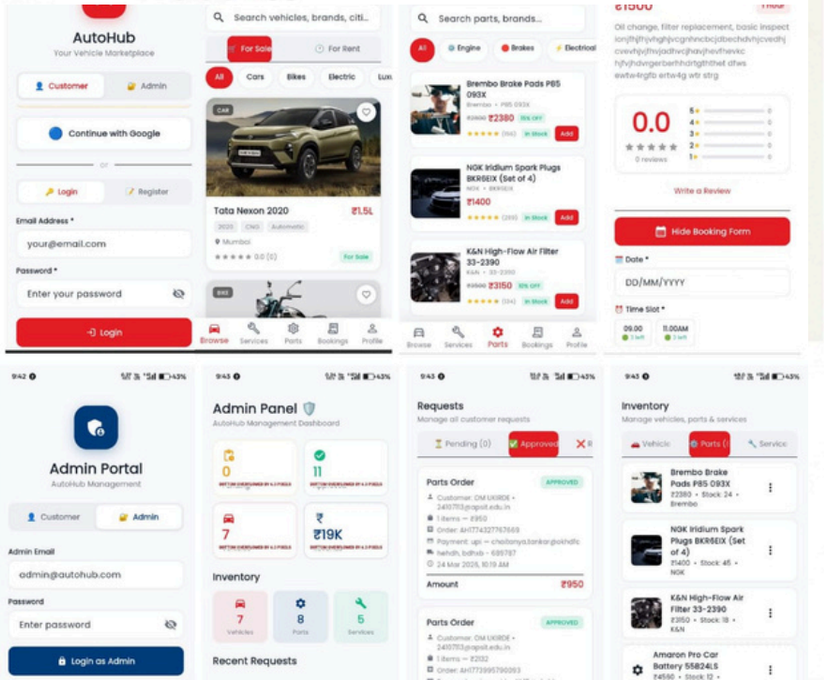
Inventory Collection:
Category (Cars),
Item Name (Car Model),
Itemees Oaers (Quantity),
Min Stock (Recrder Level),
Lest Restocked

Orders Collection:
Order ID, Customer Name (e.g., Jane Doe), Items (Array), Tatal Price (SX), Estimated Time (7 days), Status (Completed).

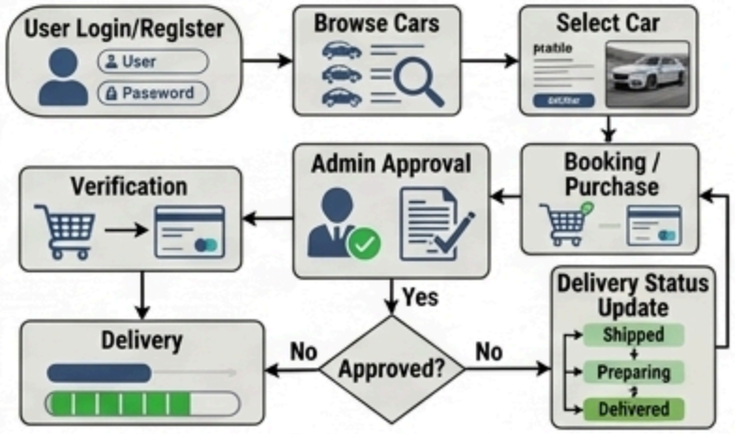
Objectives

- Build a digital system to manage car sales and showroom operations.
- Provide user-friendly interface for customers and admin.
- Enable real-time inventory and booking tracking.
- Improve efficiency of showroom management.

Results



Workflow



Key Technologies:

1. Flutter
2. Firebase
3. Dart
4. Android Studio

Conclusion:

- System improves showroom efficiency.
- Reduces errors and saves time.
- Scalable for future enhancements.
